

DESIGN: SIMON MORASI PIPERČIĆ

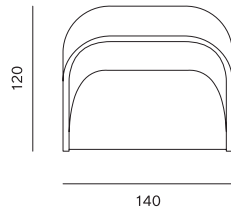

UP-LIFT represents innovation in a sofa typology with its integrated bed. Its shape allows for transformation through the simple raising UP of the back rest, which causes the automatic LIFT of the leg rest, whilst maintaining an optimal height. Its harmonious form consists of two separate volumes, which rotate around each other in an eccentric fashion. The armrest is curved, as it also functions as a wheel, and the backrest is tilted and rounded to minimise the volume. These curvatures are what characterise UP-LIFT. Besides its specific rotation, harmonious ergonomics and shape, every detail of UP-LIFT has been carefully thought out and designed. Special attention was given to the lower construction. Elastic bands and high quality foam placed at strategic points allow for maximal comfort and minimal bulk. In addition to the loveseat, the UP-LIFT family also includes an armchair, which unfolds into a single bed. Together or apart, they allow for free furniture configuration, and their dual functions provide interesting interior layout scenarios that call for additional sleeping furniture.

STRUCTURE	MDF
SUSPENSION	elastic webbing
SEAT	HR foam, polyester wadding
BACKREST	HR foam, polyester wadding
LEGS	PVC
WHEEL	PVC + high resistant rubber
UPHOLSTERY	fabric
MATTRESS TYPE	HR foam
